

Teambuilding: Flying in Formation

Workshop Duration: 1 Day

Facilitation in English (aussi disponible en français)

Workshop Description

In nature and in business, precision of execution is often empowered by foundational principles that have been put in place. Aerodynamic analyses of the flight patterns of geese have determined that flying in a V-formation is at least 70% more efficient than flying alone. Behavioural scientists and management development specialists have successfully applied several of the powerful teambuilding principles demonstrated by geese in nature.

This workshop is designed to equip you with an understanding of how to leverage some of the teambuilding behaviours demonstrated in nature, in order to build strong, high-performing teams where both the individual and the team can reach their true potential.

Who Should Attend

Managers, team leaders, project managers, and their teams

What You Will Learn

- How to apply powerful teambuilding principles modeled in nature by geese
- The important roles and responsibilities of each member of a team
- The distinct phases of team development
- How to move through the phases of team development
- How team members can take initiative and ownership
- Key principles to follow to ensure team success
- Three levels of team structure
- Processes for developing trust and respect on teams
- Methods for sharing, understanding and accepting the message
- Strategies for considering both individual and team motivational factors
- How to communicate effectively to get what you need

At the end of this workshop, you will be equipped to:

- Understand the team leader's roles and responsibilities
- Understand the team member's roles and responsibilities
- Apply more effective interactive skills within the team
- Enhance overall team performance
